

Method and System for Project Customized Business to Business Development With Indexed Knowledge Base

ABSTRACT OF THE DISCLOSURE

A method and system for implementing a project development workspace comprises a project development Website, a project, a project workspace, and a unidirectional data gate. The project development Website includes a multi-dimensional knowledge base. The project workspace is specific to the project and is associated with, but distinct from, the project development Website. The unidirectional data gate is for transferring data from the project development Website to the project workspace, without influencing the contents of the project development Website.
